

To Whom It May Concern:

I am a subscriber to both Sirius and XM radio and am grateful to have the creative, high quality, and broad based programming that both offer (except channel 45 XM Cafe because the programmer stinks). Since I have subscribed to satellite radio I NEVER listen to AM or FM anymore because of the redundant and predictable programming. Because I can't stand to listen to AM or FM anymore I would be deprived of critical traffic and weather updates if satellite radio did not provide it. The public is entitled to this information from whichever media source they choose to listen to- important traffic and weather information is the property of all media sources and should not be excluded from any one. Thank you.
